Method of Printing

Our Printing Services

SILKSCREEN PRINTING

Silkscreen Printing is a stenciling method that involves printing ink through stencils that are supported by a porous fabric mesh stretched across a frame called a screen.

PAD PRINTING

This method which is any excess is scraped off and a silicon pad presses against the design and transfers it onto the subject / material surface. Pad printing is best suited to printing narrow or curved pens, clips, and metal pens.

ROLLER PRINTING

Roller printing generally known as cylindrical screen printing, is another method of printing which uses cylinder method printing. It has fine sharp outline and good prints can be obtained which is difficult to get in block or screen printing.

FULL COLOUR UV PRINTING

UV Printing is a form of digital printing that uses ultraviolet lights to dry or cure ink as it is printed. Full color printing can be done at a minimum cost if compare with Silk-screening or Pad Printing.

CRYSTAL FILM PRINTING

Crystal Film Printing is a form of digital printing that prints on transparent film and then stick the latter onto the crystal using special glue. The glue on the crystals needs to be evenly distributed before sticking the film onto the crystal.

FULL COLOUR DIGITAL PRINT C/W EPOXY DOME

Full Colour Digital Printing usually it is printed using ink-jet or laser printer and able to print in high volume. It can comes together with epoxy dome (a clear plastic coating and protect it from damage).
